

Our Goals | These are measures that the collaborative is actively collecting data on and implementing quality improvement projects for.

Surviving | the children who have celebrated their 1st birthday of the children who are either alive or have died before reaching 1 year but would be 1 year old today

Eating Cake | the percentage of children weaned from tube feeding (all oral) by 1st birthday

Screenings | increase the percentage of patients with developmental screening completed between 6-7 months out of 7-month-old patients to 75%

Additionally, the collaborative is actively working on these measures:

- Reduce the percent of patients who have a prenatal diagnosis out of those patients that were admitted for stage 1 palliative surgery at care
- Reduce the percent of patients who experience an adverse event following Stage 1 Palliation out of those who that had Stage 1 Palliation

Our Achievements | Measures and milestones the collaborative has achieved since the start of Phase II efforts.

Prenatal Comprehensive Counseling | Percent of patients and families that received comprehensive counseling out of those that were admitted for Stage 1 Palliative surgery at care center with a prenatal diagnosis

Published Learnings | Any published research that used NPC-QIC data. A full list of publications is located [here](#) on our website.

Transparent Outcomes | For our Fall 2018 Learning session, we asked our care centers to share their outcomes transparently. Of the 52 care centers entering data, 26 agreed to share transparently at the Learning Session.
